- more text

1.2 Literature review

One important development was made by Abrams, Gillies, and Lambert (2005).

Methods

2.1 Important main method

Initial modelling was performed using linear regression as defined in equation (2.1).

$$y_i = \beta_0 + \beta_1 x_i + \varepsilon_i, \ \varepsilon_i \stackrel{iid}{\sim} N(0, \sigma^2)$$
 (2.1)

2.2 Additional method

- text 6
- text 7

Results

3.1 Main results

And here is an example table of regression coefficients in Table 3.1.

Table 3.1: Parameter estimates from regression of mpg on weight.

	Estimate	95% CI lower limit	95% CI upper limit
(Intercept)	37.29	33.61	40.97
wt	-5.34	-6.44	-4.25

Example text example text.

An example of a figure is shown in Figure 3.1.

```
plot(pressure, pch = 19, type = "b")
```

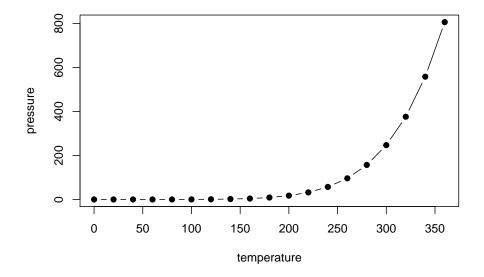

Figure 3.1: An example figure.

And we can include image files directly, such as Figure 3.2.

knitr::include_graphics("img/mtcars-scatter.png")

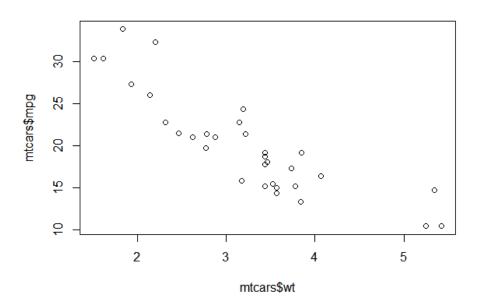

Figure 3.2: Another example figure.

To figure code chunks add the chunk option fig.pos="H" to use the LaTeX float package to try and position the figure where the code appears.

Also, this is how to reference a section, e.g. the Introduction was chapter 1 and the Literature Review was section 1.2.	;

Discussion

4.1 What I found

- text 1
- text 2
- text 3
- more text
- more text

4.2 What it means

- text 6
- text 7
